Greenwashing Dispossession:

The Israeli Renewable Energy Industry and the Exploitation of Occupied Natural Resources

As of August 2024, at least ten commercial Israeli renewable energy fields are operating in the occupied West Bank, the Syrian Golan, and the Naqab - contingent on the exploitation of occupied Palestinian and Syrian land and natural resources.

These solar and wind fields are connected to the Israeli electricity grid and supply electricity to Israeli households and industry on both sides of the Green Line while reinforcing the de-development and dependency of the Palestinian electricity sector. Solar Field 2
